The Board of Directors of Pilbara Minerals Limited (“Pilbara” or the “Company”) (ASX Code “PLS”) would like to announce that it has let two contracts for airborne geophysical surveys. These surveys will cover virtually the entire extent of the Company’s exploration licence holdings which located in the West Pilbara region of north-western Western Australia. Please refer Figure 1.

Pilbara holds title to 13 granted exploration licences which together total approximately 1,790 square kilometres. The project consists of four groups of exploration licences that are situated within an area extending from about 70km southwest of Karratha to approximately 110km southeast of Karratha.

The Company’s exploration targets are blind occurrences of volcanogenic massive sulphides (potentially Cu-Zn-Au-Ag mineralised), layered basic intrusives (potentially Ni-Cu-PGM mineralised) and magnetite-bearing sequences (potentially iron mineralized) typically hosted within the Archaean volcano-sedimentary sequences that lie below extensive cover of overlying and younger Fortescue Group rocks and river alluvium.

The major geophysical survey is a helicopter-borne VTEM electromagnetic and magnetic survey which is being undertaken by GeoTech Airborne Pty Ltd of Malaga, WA. It will cover almost the full extent of 12 exploration licences (approximately 1,565 square kilometres) on flight lines 400m apart. Operations are commencing this week and are expected to complete in about five weeks.

An airborne magnetic and radiometric survey by fixed-wing aircraft at 200m line spacing is being carried out by Fugro Airborne Surveys Pty Ltd of Osborne Park, WA. It is approximately 155 square kilometres in extent, being the entire area of the Company’s westernmost exploration licence. This survey also is commencing this week and is expected to take four days to complete.

Programme planning, survey quality control and geophysical interpretation is being carried out by Southern Geoscience Consultants Pty Ltd, Belmont, WA.
On completion of the surveys, geophysical and geological interpretations will be carried out and results reported in due course.

Yours faithfully,

Mathew Walker
Chairman
